

Global Trading Reach

hosted at the heart of the markets

SunGard, one of the world's leading software and IT services companies, works together with Interxion to provide colocation and proximity hosting services in Europe, thus exploiting the full potential of its global, low-latency, connectivity and trading services.

About SunGard's global trading business

SunGard serves more than 2,000 financial institutions across the globe, making the links between the buy-side and sell-side worlds. SunGard provides multi-asset, front- to back-office trading solutions for equities, fixed income and derivatives markets worldwide. These solutions support full-lifecycle trading and trade processing activities, including information services, market connectivity and order management.

Global market access

Since 1987, SunGard has been a leading enabler of access to new electronic markets, based on its Valdi front-office solution suite. Today, the company provides high-performance trading and market data gateways for over 130 markets worldwide. SunGard connects to all global equities and derivatives exchanges where there is a community of interest among international investors and their brokers and in recent years has also built gateways for MTFs, ECNs and Dark Pools in worldwide securities markets.

Multi-asset trading capability

SunGard's Valdi is a modular solution suite that provides client connectivity, order management, advanced execution, high-performance market access and dedicated workstations. This offer has evolved to cover order flows for all listed asset classes, with managed interfaces to major FIX networks and connected brokers.

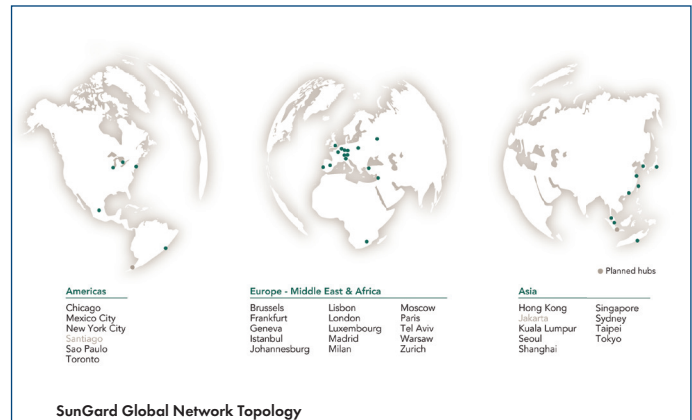

World-wide, low-latency network

The SunGard Global Network (SGN Securities) is a high-capacity, global, order-routing and market-data network, linking buy- and sell-side institutions globally in one of the world's largest Direct Market Access (DMA) trading communities, across 110+ equities and derivatives markets.

ASP services

Via SGN Securities, SunGard also provides managed access to over 100 global equity and derivatives markets through its Valdi Market Access ASP offering. This enables exchange members and their DMA clients to trade on these markets from any workstation or application connected to SGN.

SUNGARD®

What SunGard delivers...

Valdi order and execution management suite

- High-performance access to 130+ worldwide markets via professional workstations, browsers and FIX
- Order management and advanced execution: algorithmic engine and smart routing

SunGard Global Network

- Global connectivity to clients and markets

Valdi Market Access services

- Access to over 100 global equity and derivatives markets via the SunGard Global Network

SunGard & Interxion

SunGard's major SGN network nodes and Valdi Market Access services in London and Paris are hosted in Interxion's City of London and Paris Financial Hubs. By locating their trading platforms in Interxion's Financial Hubs, exchange members and their DMA clients can therefore achieve secure, low-latency access to the major global markets.

Financial Hub

data centres at the heart of the markets

Interxion is a leading pan-European operator of carrier-neutral colocation data centres, serving over 1,100 customers from 28 facilities in 11 European countries, including over 200 customers from the financial services industry. To add maximum value for customers in the financial sector, strategically located high-density space has been reserved for exchange members and their DMA clients in Europe's financial centres. These Financial Hubs provide low-latency colocation and proximity hosting to leading liquidity venues across Europe. They also house an interactive and growing community of sell-side institutions, proprietary trading firms, hedge funds, and technology and network service providers.

Relevant expertise & resources

Interxion has many years of experience in supporting the financial services industry. Our dedicated Financial Services team understands your requirements and will ensure a flexible and smooth service delivery. For latency testing assessment and new service development, we also offer a Financial Hub Test Lab.

Maximum security, availability & service

Interxion's Financial Hubs are based in ultra-secure, best-in-class facilities. They have multiple layers of security and redundancy. They offer high-density power configurations as standard. Service-level management and customer reporting is taken care of by Interxion's single point of contact, multilingual, ISO 27001-accredited, ITILv3-certified European Customer Service Centre.

What Interxion delivers...

- Colocation to several trading venues and large brokers
- Lowest-latency proximity hosting to the top two European trading venues of any independent location
- Access to an extensive community of ISVs and VARs
- A wide choice of Network Service Providers for ultra-low-latency dark fibre, WDM and Ethernet services
- Industry-leading security and redundancy levels
- Flexibility; industry knowledge and expertise
- Seamless scalability
- Financial Hub Test Lab for latency assessment, optimisation and innovation
