

Financial Hub - Frankfurt

Cost-effective exchange connectivity

Market access infrastructures in Europe have become more complex, with new lit and dark liquidity venues established following MiFID. As well as dealing with increasing competition and challenging market conditions, investment and trading firms also have to ensure that latency doesn't negatively impact trading results, whilst keeping costs under control.

Interxion's Frankfurt Financial Hub offers investment and trading firms redundant access to the trading systems of the Deutsche Börse Group. The solution is specifically designed to meet the needs of those market participants for whom reducing costs and complexity of market access is the primary driver, and latency is of lower importance. This is achieved through a highly secure, shared infrastructure approach.

Ease of migration

The solution offers market participants an easy migration path to new access options available from Deutsche Börse Group. Current and future market interfaces and access infrastructures are hosted and managed by Interxion for a fixed monthly fee which ensures predictable budget planning. In addition operational costs are significantly reduced due to the provision of a single point of contact for all technical exchange connectivity requirements.

Community benefits

Customers can easily and cost-effectively interconnect to counterparts already located in Interxion's Financial Hubs. These include the majority of cash and derivatives markets across Europe, as well as an extensive ecosystem of providers of DMA, brokerage, clearing, (real-time) market data feeds, technology, managed services and network connectivity services.

Enhanced connectivity

Latency, service levels and lead-times of fibre routes can be optimised and network costs managed down through a choice of over 350 network service providers across our European footprint.

Disaster Recovery and back-office applications

Interxion provides the ideal location for a disaster recovery solution for the exchange data centre, with a choice of connectivity options in place. In addition to this, customers can take advantage of Interxion's professional data centre environment to host their mid- and back-end applications, providing the option of colocating front-, mid- and back-end applications in a single location.

Key benefits

- Redundant access to Deutsche Börse Group's trading systems
- Cost savings and predictable budget planning through shared infrastructure
- Fully managed solution, reducing risk and complexity
- Managed migration to new market interfaces
- Availability of free test lab connectivity
- Reduce networking costs through a choice of over 350 network providers
- Industry-leading security and redundancy levels
- Partner with a data centre provider with an in-depth knowledge of your business

Maximum security & availability

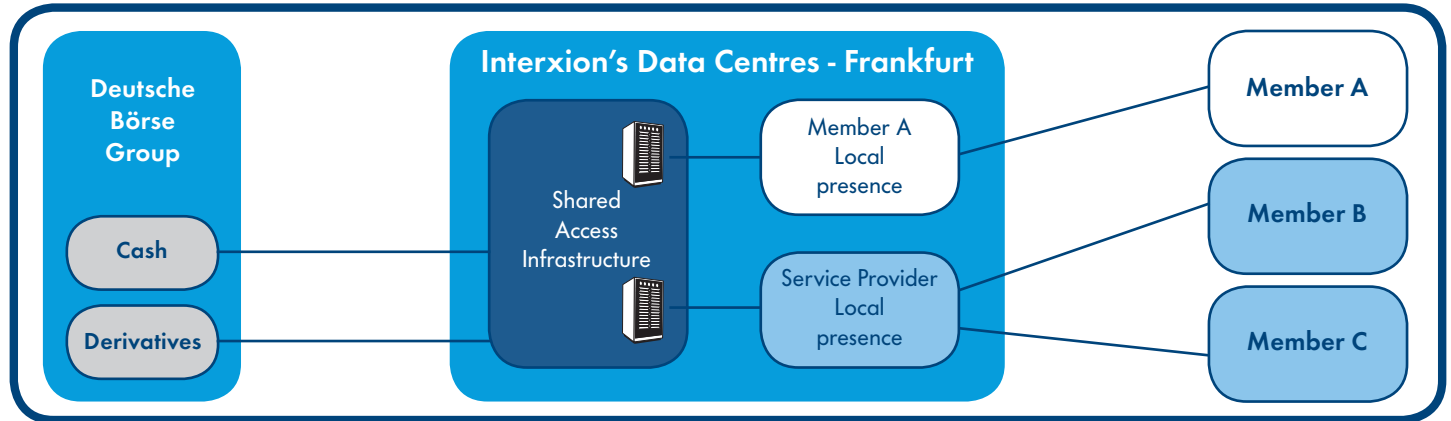

Interxion's data centres offer multiple layers of security, including man traps, CCTV and 24-hour access control. The facilities offer high-density power configurations and redundancy levels of N+1 or 2N as standard. All Interxion facilities have been accredited to the independently-assessed ISO 27001 standard for information security and business continuity.

Seamless scalability

Interxion's Financial Hubs are located in the major financial centres across Europe, such as London, Frankfurt, Stockholm, Zurich and Madrid, offering low-latency access to the majority of Europe's liquidity venues.

With over 61,000 m² of equipped space in 28 data centres across 11 European countries, Interxion offers the scalability our customers require. In addition, cross-border expansion could not be easier with just one contract and SLA required, and all supported by our multilingual European Customer Service Centre (ECSC).
