

Financial Hub - Stockholm

Leading in data centres

In today's fast-changing marketplace, financial services firms need a data centre partner that is perfectly positioned to support their objectives, not only physically but also in terms of service levels, expertise and approach.

The ideal partner should have a highly redundant, scalable and ultra-secure facility, located in close proximity to the relevant liquidity venues. In addition, it should have a broad choice of low-latency market data, reference data and connectivity options, industry-leading SLAs, a flexible approach and a sound understanding of the specific sector requirements. All at competitive rates.

Interxion's Financial Hub – our solution for the financial services community - provides all this and more. It puts market participants where they need to be: at the heart of the markets.

Proximity Hosting & Colocation

Interxion's Financial Hubs are strategically located in all of Europe's major financial centres, offering low-latency access to the majority of Europe's trading venues. In addition, they house a large and growing community of leading brokers, exchanges, MTFs and vendors.

Better connections, lower costs

Latency can be optimised and network costs managed down by installing direct cross-connects to counter-parties within the data centre. For connectivity out of the data centre, our carrier-neutrality provides redundant, low-latency fibre routes to all major liquidity venues. With over 350 network providers across our European footprint, Interxion offers the broadest possible choice of connectivity options.

Maximum security & availability

Interxion's data centres offer multiple layers of security, including man traps, CCTV and 24-hour access control. The facilities offer high-density power configurations and redundancy levels of N+1 or N+N as standard.

All Interxion facilities deploy sophisticated Site Management Systems for integrated monitoring and have been accredited to the independently-assessed ISO 27001 standard for information security and business continuity.

NGM
connecting business

Key benefits

- Specialist provider of colocation and proximity hosting to the Financial Services industry
- Colocation to Burgundy & Nordic Growth Markets (NGM)
- Proximity Hosting to Nasdaq OMX
- Scalability of space & high-density power (up to 5KVA per rack as standard)
- 30+ network providers of low-latency routes
- Test Lab

Seamless scalability

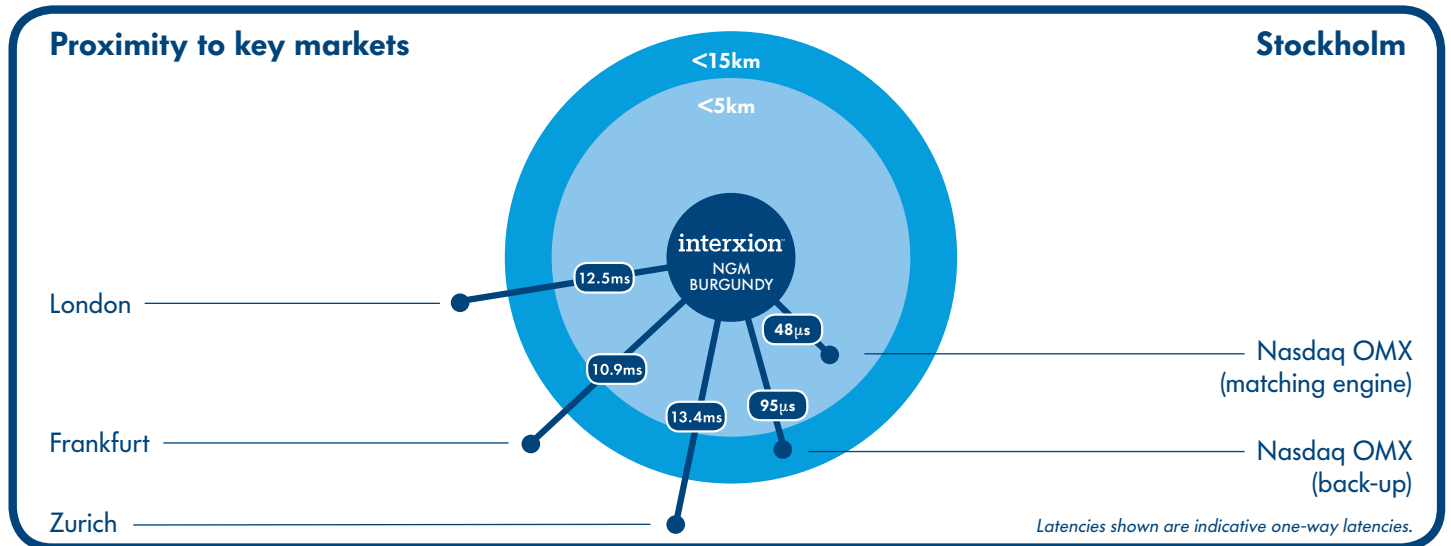

With over 55,800 m² of equipped space in 28 data centres across 11 European countries, Interxion offers the scalability you are looking for. Cross-border customer expansion could not be easier with just one contract and SLA required. Service-level management and customer reporting is taken care of by Interxion's pan-European, multilingual Customer Service Centre.

Community & innovation

Customers can easily and cost-effectively interconnect to counter-parties and vendors already located in our Financial Hubs. These include a wide array of partners, offering value-added services such as DMA, brokerage, clearing, market data feeds, technology, managed services and network connectivity.

At our Test Labs, customers can optimise existing applications, develop and test their trading strategies and assess new technology and latency to the markets.
