

Equipment Housing

All your needs under one roof

Interxion offers state-of-the-art facilities for equipment housing with unparalleled connectivity options and flexible support services. Maintained round the clock by expert staff, all facilities are equipped to the highest industry standards, with multiple redundant fibre connections, 24 hour security, automatic fire suppression, flexible AC and DC power distribution, and uninterruptible power supply (UPS) with backup generators. You can house your equipment in shared rooms, cages or private suites in a highly secure managed environment with up to 99.999% availability of power. On-site hands-and-eyes engineering and maintenance services include pre-scheduled and rapid-response installation or maintenance work.

Guaranteed power

Availability of power is essential. The vast majority of our data centres have redundant grid connections. Every data centre has a power backup installation in case of outage. Generators, in combination with UPS systems, guarantee maximum availability. We also provide a full range of output voltages and currents. Interxion's industry-leading SLAs define the level of guaranteed availability, ranging from 99.9% up to 99.999%. We provide high-power-density configurations for user equipment as standard.

Controlled environment

All Interxion facilities are equipped with redundant cooling equipment with free cooling in most. Down-flow cooling units guarantee maximum cooling of your equipment. Room temperature and humidity are maintained in line with ASHRAE recommendations.

Key benefits

- State-of-the-art facilities with 24-hour security support
- Guaranteed power availability up to 99.999%
- High-power-density configurations available as standard
- ISO 27001-certified information security management systems
- Supported by 24x7 European Customer Service Centre

Equipment Housing & Related Services

- Shared rooms, cages and private rooms and suites
- Remote hands-and-eyes and 24x7 installation and maintenance
- Full range of Interxion connectivity, management and backup services

Leading-edge security

Every Interxion data centre is equipped with a state-of-the-art Security Management System to prevent unauthorized access to your equipment. With proximity cards, typically combined with CCTV, biometric readers and man traps, access is limited to authorized personnel. The entire international Interxion facility infrastructure is monitored 24x7 (Chiller, CRAC, Fire Panels, Generator, UPS, etc.) using ISO 27001-certified information security management systems.

Fire protection

All of Interxion's data centres are equipped with Very Early Smoke Detection Alarm (VESDA) and gas-based fire-suppression systems as a first-line defence. These systems are automatic and monitored 24x7.

Additional services

You can combine a range of other services with your equipment housing contract, including hands-and-eyes, monitoring, connectivity, hosting, and backup and restore services.

Equipment Housing

Equipment Housing options

Shared Rooms

Within a shared room Interxion can provide a dedicated footprint to install your cabinets in the data centre. Your cabinets will occupy a shared area alongside those of other clients. Each cabinet has a dedicated dual power feed, coming from a shared power distribution system. Cable trays are included. You can install your own cabinets or purchase them from Interxion.

Cages

A cage provides you with space separated from other clients, within a shared area in the data centre. You share power distribution and the climate control system with other clients.

Private Rooms & Suites

A private room or suite provides dedicated space which can be tailored to your specific needs. Your suite is located inside a shared climate area, but it is walled off from other client areas. Power supply and access control systems are dedicated exclusively to your needs for maximum security and availability.

Customer Service

Over and above expert local staff, Interxion provides multilingual customer support through its European Customer Service Centre (ECSC) which monitors customer security and systems 24x7 from a UK-based NOC. The ECSC and all Interxion data centres use ISO 27001-accredited information security management systems.

Contact us

We will be happy to provide you with more detailed information about the equipment housing services available in particular Interxion data centres along with the various pricing and SLA options.
