

INTERXION LONDON CONNECTIVITY HUB

WHY INTERXION LONDON

- Over 80 connectivity providers in our London Interxion campus
- Located in the City of London, diverse location to facilities located in Docklands
- Ability to peer with 700+ ASNs via LINX and LONAP Internet Exchanges
- Home to a LINX core node (the only LINX core node located outside of the Docklands)
- BT's IP Network (AS2856) located on site
- 8 leading Content Delivery Networks (CDNs) present on campus
- Over 10 unique, dual entry fibre providers into the campus.
- Top 5 Global IP Transit providers all on site
- Microwave providers with low latency connections to key UK Financial Services venues and Frankfurt

Interxion is one of the most connected data centre campuses in London. Our London Connectivity Hub is made up of over 80 connectivity providers, a LINX (London Internet Exchange) core node, BT's UK peering platform as well as all the top CDN's. This makes Interxion London the perfect platform to peer with other providers, distribute content and provide services to our extensive customer community. Whether you're expanding your coverage or migrating from another location, our London data centres provide the perfect environment for your operations.

LINX has over 600 members connecting from over 65 countries across the globe

PEERING IN LONDON

With the LINX, LONAP and BT's UK peering platform in the same facility, network service providers can exchange traffic and peer with a wide range of connectivity providers, enabling them to architect their network in the best possible way and meet the requirements of their customers simply and cost effectively.

In 2014 LINX upgraded Interxion London into a core node site. This reflects the growing importance of our London data centre campus as a connectivity hub and interconnection point. LINX has over 600 members connecting from over 65 countries across the globe, providing members with the reach, diversity and performance they need to provide the best possible service to their customers.

Interconnectivity at Interxion London enables Network Service Providers to:

- Reduce costs
- Boost revenues
- Mitigate Risk
- Optimise network performance
- Improve resilience and system performance

INTERXION LONDON CONNECTIVITY LIST

With over 80 carriers, ISP's and IP exchange providers, you'll find a ready-formed community operating in Interxion London, providing opportunities to increase revenues and grow your business. To see the full list of connectivity providers in London visit

GEOGRAPHIC DIVERSITY

Interxion's London data centre campus is located 3 miles away from the Docklands, providing a geographically diverse location for network service providers seeking to add resilience to their networks. Our London campus is not only outside of the flood zone, it is also served by separate power substations to those that supply the Docklands. This means network infrastructure at our campus can be a truly diverse location to that of the Docklands.

ACCESS TO CUSTOMERS

Because we actively encourage the development of communities of interest, you'll have access to a vibrant marketplace of potential customers inside the data centre. We focus on attracting organisations from dynamic, fast-growing industry sectors, including financial services, digital media and cloud, where high-capacity, high-performance networks are always in demand.

Financial Services

Digital Media

One of our extensive customer communities in London is the Financial Services Hub. This community is extremely connectivity hungry, demanding carrier diversity and low latency networks to the key liquidity venues in the City of London, Slough, Basildon and the rest of Europe. In addition, the Digital Media community present in the campus also requires fast, high bandwidth connectivity options for transporting huge quantities of content across the network and out to consumers.
