

OUR APPROACH TO RESPONSIBLE ENERGY USAGE

As one of Europe's leading colocation providers we understand the importance of sustainability and continue to invest in developing and operating sustainable data centres.

INDUSTRY PARTNERSHIP

Interxion is working with others in the industry to drive innovation in sustainability for data centres. Interxion was a co-founder of the EMEA Chapter of the Uptime Institute and is a member of the Green Grid tech committee and advisory council.

100%

RENEWABLE

100% of our energy is from renewable sources. We've pioneered energy-saving designs and harnessed everything from arctic winds to underground aquifers to the Baltic Sea to reduce our carbon footprint.

INNOVATION

Our internal Energy Strategy Group is dedicated to developing, implementing and governing the energy strategy for Interxion. With participation and support from senior management, the group's areas of focus include intelligent energy buying, continually improving our energy efficiency and Power Usage Effectiveness (PUE) and establishing the value of energy as a core service to customers.

DESIGN

Our latest data centre, DUB3 has been designed with a focus on energy-saving, modular architecture, incorporating cooling, as well as, maximum efficiency components

POLICY

Interxion sits with the EC Joint Research Institute for environment and sustainability. The mission of the institute is to provide scientific and technical support to help shape EU policies for the protection of the environment.
