

COPENHAGEN DATA CENTRE CAMPUS

Connect, transact and grow

WELCOME TO COPENHAGEN

Community and neutrality in Copenhagen

Situated in Copenhagen's 'silicon valley', our CPH data centre offers you a ready-formed community of carriers, service providers and other potential suppliers, partners and customers, all attracted to the absolute neutrality of our facility. Using our remote site located 12 km away we offer the possibility to run a dual data centre set up for redundancy.

Ranked by the World Bank as one of the best countries in the world to conduct business, Denmark boasts a forward-thinking culture, quick to adopt new technologies and pioneering renewable energy solutions. Copenhagen, the country's economic and financial centre, is one of the world's most sustainable and ecologically sound bases for businesses looking for scalability and a well-connected hub.

West of the city centre you'll find our neutral-neutral data centre. Ideally located for both national and international businesses, we provide the peace of mind that comes from absolute neutrality, a wide choice of connectivity, the fastest performance for your hosted systems, and the security and reliability that you expect from a world-class data centre provider.

// *Saxo Bank has an aggressive expansion plan for the coming years, we were looking for a partner, who could accommodate this growth plan, but at the same time provide a flexible solution, whereby Saxo Bank didn't have to commit to a major overhead.*

Saxo Bank, Robert Smith, Vendor Manager

Designed for business

Neutrality encourages community and growth

Our Copenhagen data centre supports your business whether you operate within Denmark, are looking to extend across Europe, or are interested in utilising low-latency routing through Iceland.

The data centre is a connectivity hub that is home to the Danish Internet Exchange (DIX), to NL-ix, and to more than 45 leading national and international carriers, Internet service providers and content distribution networks. With carrier points of presence installed in the data centre and Cross Connects that can be implemented quickly, it's easy to connect to national and international carriers to suit your needs.

Our absolute neutrality attracts a diverse community of service providers; including system integrators, traditional hosting services, public and private cloud platforms, and businesses utilising those platforms to develop and deliver applications and services. This thriving community creates an IT marketplace that provides you with the flexibility to transition between different solutions and service models to suit your needs.

We actively support this marketplace and are committed to helping all of our customers establish valuable business relationships with potential suppliers, partners and customers to lower the cost of doing business. Our neutrality allows you to multisource without risk within an efficient, cost effective ecosystem in the data centre.

25

minutes drive from
Copenhagen Airport

45+

fixed and mobile carriers,
ISPs and CDNs

24x7

dedicated
support

Connectivity

- Direct access to Microsoft Azure, Amazon Web Services, IBM Cloud, Oracle Cloud Infrastructure
- Direct access to DIX and NL-ix
- 45+ fixed and mobile carriers, ISPs and CDNs

Community

- Community of cloud platforms, hosting providers and SIs
- Diverse enterprise community ranging from small national companies to large multinationals

Location

- 25 minutes from Copenhagen Airport
- Convenient location west of city centre
- Additional remote location 12km away

Flexibility and choice

We pioneered modular data centre design and have been refining it for more than 15 years to enable rapid and efficient expansion. We offer significant flexibility in what you do with your space and how you extend your footprint.

- Colocation in Cabinets, Cages, and Private Rooms
- Rapidly installed cross connects
- 24x7 Hands and Eyes technical support service
- Meeting rooms and office space

Designed for mission-critical applications

The peace of mind you need

When you colocate with us, you can be confident about the physical security of your systems, the performance of your infrastructure and its availability – assured with a 99.999% availability SLA. You never have to worry about running out of space or power. And if sustainability is high on your agenda, that's covered too.

For more than 15 years we've been setting industry standards in data centre design, build, operation and management to deliver continually improving reliability, security, resilience, efficiency and performance.

Security

The data centre is monitored 24x7 by CCTV and security patrols. There are multiple access barriers, including mantraps, contactless key cards and biometric readers. You can also add your own security systems to a Private Room.

Operational excellence

Like all our data centres, Copenhagen has ISO 27001 and ISO 22301 certification. We combine state-of-the-art systems and processes to monitor and manage operations 24x7, combining on-the-ground local teams with centralised oversight by our 24 hour multilingual European Customer Service Centre (ECSC).

Resilience and business continuity

From 24x7 monitoring and alarms for every critical system to incident and business continuity management, we follow best practice and operate in accordance with the ITILv3 framework. High levels of redundancy and service assurance are built into our data centres:

- **Connectivity:** dual-entry fibre from two separate carrier main routes and rapidly installed Cross Connects.
- **Power:** secured supply; two power feeds for all equipment, each independently equipped with UPS and generator backup with full load capacity for indefinite running.
- **Environment:** SLAs on temperature and humidity in line with ASHRAE recommendations; N+1 cooling; sophisticated water and smoke detection systems; advanced fire suppression in line with local regulations and designed for maximum safety and minimum damage.

Sustainability

We use 100% renewable energy and our PUE measures are exceptional by any standards. We use free cooling and a custom cold-aisle containment solution to support higher power densities on low raised floors more efficiently, reducing the overall cooling overhead by as much as 30%.

Operational excellence

- 99.999% availability SLA
- 2N or N+1 configurations for all critical systems
- 24x7 operation and monitoring

Sustainability

- 100% renewable energy
- Exceptional PUE measures

Cloud Connect

Establish private, secure and SLA-based interconnections between AWS, Microsoft Azure, Oracle and IBM Cloud and your infrastructure through Cloud Connect. Doing this provides a reliable connection with increased performance and bandwidth, and is more secure than Internet-based connectivity. Benefits of Cloud Connect include:

- **Secure** - Avoid the public internet and connect securely to your cloud provider
- **Reliable** - Ensure optimum performance with SLA backed connectivity and uptime
- **Fast** - High bandwidth, low latency connectivity
- **Cost-effective** - Reduce network costs with a single interconnection to multiple clouds and no additional charges on data traffic

Peder Bank,
Managing Director, Denmark

About Interxion

Interxion (NYSE: INXN) is a leading provider of carrier and cloud-neutral colocation data centre services in Europe, serving a wide range of customers through over 45 data centres in 11 European countries. Interxion's uniformly designed, energy efficient data centres offer customers extensive security and uptime for their mission-critical applications. With over 700 connectivity providers, 21 European Internet exchanges, 21 European Internet exchanges, and most leading cloud and digital media platforms across its footprint, Interxion has created connectivity, cloud, content and finance hubs that foster growing customer communities of interest.
