# Interconnect with Google Cloud Platform at Interxion

Google Cloud Interconnect

Integrate Google Cloud Platform into hybrid or multi-cloud environments with Google Cloud Interconnect (GCI).

Google Cloud Interconnect (GCI) provides secure, dedicated connectivity between your infrastructure colocated at Interxion and your Google Cloud Platform environments.

Using GCI you'll have the low-latency connectivity and consistent high throughput needed to support demanding applications and services — such as those using big data, machine learning, AI, blockchain or IoT.

You can connect to GCI at any Interxion campus using the Interxion Cloud Connect service. In certain campuses where Google private edge PoPs have been deployed, you have the additional option of cross-connecting directly to GCI.

Google Cloud Interconnect benefits

- **Security.** Protect your data by using a private connection to the Google Cloud Platform that never touches the public internet.

- **Cost-effectiveness.** Simplify your network architecture and reduce network and egress costs.

- **Performance.** Connect to the Google Cloud Platform with higher availability, lower latency and more consistent throughput than internet-based connectivity can offer.

Google Cloud

About Interxion

Interxion (NYSE: INXN) is a leading provider of carrier and cloud-neutral colocation data centre services in Europe, serving a wide range of customers through over 50 data centres in 11 European countries. Interxion's uniformly designed, energy efficient data centres offer customers extensive security and uptime for their mission-critical applications. With over 700 connectivity providers, 21 European Internet exchanges, and most leading cloud and digital media platforms across its footprint, Interxion has created connectivity, cloud, content and finance hubs that foster growing customer communities of interest.

Cross Connect directly to GCI (Dedicated Interconnect)

In certain Interxion campuses, customers have the option of cross-connecting directly to GCI. This option is known as Dedicated Interconnect. Currently, this capability exists in:

- Frankfurt, Germany
- Paris, France
- Marseille, France
- Stockholm, Sweden
- Madrid, Spain

Using an Interxion Cross Connect, you can rapidly establish a physical connection between your local infrastructure and the Google Cloud Platform. These connections are ideal for supporting applications and services with high bandwidth requirements (10 Gbps and above). Interxion customers in these markets also have the option of accessing GCI via Cloud Connect.

Access GCI via Interxion Cloud Connect

You can connect to GCI using the Cloud Connect service at any Interxion data centre campus. This option is known as Partner Interconnect.

Cloud Connect is a layer 2 software-defined network (SDN) connecting Interxion facilities. It creates virtual point-to-point connections from Cloud Connect customer ports to the GCI PoPs installed at selected Interxion facilities.

Existing customers can use the customer portal to order GCI connections.

Interxion Cloud Connect benefits

- **One connection.** Connect directly to the Google Cloud Platform and other public clouds via a single physical connection to the Cloud Connect platform at any Interxion data centre.

- **Security.** Avoid the public internet and connect securely to the Google Cloud Platform and other public clouds.

- **Reliability.** Ensure optimum performance with SLA-backed connectivity and uptime.

- **Cost effectiveness.** Reduce network costs with a single interconnection to multiple clouds.

- **Ease of use.** Manage your orders and changes using our customer portal.
